

Our programs offer:

- Evidence-based instructional strategies
- Opportunities to learn through play and social interactions with peers
- High teacher-to-child ratios
- Development of important skills (social and friendship skills, pre-academic skills, self-care and daily living skills, communication and language skills) to prepare children to transition to kindergarten or 1st grade settings

Program schedules:

Although each program follows a different daily schedule, all programs follow the university semester schedule and are closed during fall and spring breaks, intersessions, and all university holidays.

Edna A. Hill Child Development Center

Looking for childcare, early childhood education, or early intensive behavioral intervention?

Every child has the ability to learn.

Our programs

Sunnyside Toddler Program:

- Full-day inclusive childcare program
- Toddlers ages 12-30 months
- Focus on learning through exploring books, stories, art, music, social interactions, and play
- Encourages independence through self-care skills, teaching children to ask for help, and other activities

Educare Preschool Program:

- Full-day inclusive preschool program
- Children ages 2 ½ through 6 years

- Focus on learning through play and exploration, center activities, circle times, and routines such as snack and meal times
- Promotes acquisition of social and friendship skills, pre-academic skills, and independent self-care skills

Little Steps ABA Early Intervention Program:

- Early intensive behavioral intervention program
- Children ages 2 ½ through 7 with intellectual and developmental disabilities including autism spectrum disorder, Down syndrome, and mental retardation
- 1:1 ABA intervention involving individualized, evidence-based assessment and intervention to increase appropriate skills (communication, social skills, pre-academic skills, self-care skills) and decrease challenging behavior

Kansas Early Autism Program (KEAP):

- Early intensive behavioral intervention program
- Children ages 2 ½ through 7 who have deficits related to autism spectrum disorder and other intellectual or developmental disabilities
- 1:1 ABA intervention involving individualized, evidence-based assessment and intervention with the goal of increasing meaningful skills (social skills, communication skills, self-care skills, academic skills, and play skills) and decreasing challenging behavior
